www.instant3dhub.org/showcase

Based on 25 years of research and five platform generations, the instant3Dhub is the leading Visualization as a Service solution. Any data, any device, any size for 3D CAD data in the automotive industry, in BIM or in plant engineering.

ANY DATA

Addressing the original data in its full complexity. No restrictions, even with high dynamics with regard to data modification and distribution.

ANY DEVICE

Adaptive recognition of the device class, from mobile devices to workstations. Any target platform – web-based, native and Java – for VR, AR, touch and desktop systems.

ANY SIZE

Visualization of data sets of any size without reduction. Depending on the scenario, the necessary calculations are distributed intelligently and proportionately between the end device and the server.

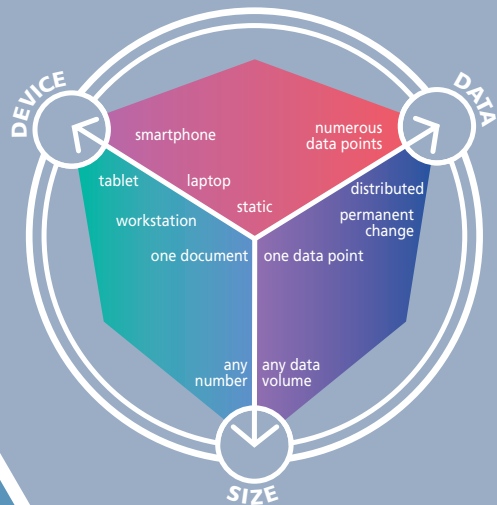

INSTANTLY

No pre-processing and no waiting times for users. The 3D data is prioritized according to visibility and immediately visualized.

instant3Dhub

powered by

BENEFITS AT A GLANCE

- ▶ Easy integration via web standards
- ▶ Automatic rendering selection at runtime
- ▶ No manual preparation
- ▶ Full complexity of original data available
